Grading Sample H: Near Field Communication (NFC)

Row 1: 1

This artifact does receive the point because it has both the purpose and how NFC works.

Row 2: 1

This response does receive the point because they identify the purpose of NFC to allow devices to communicate. They state: “that [NFC] was created in order to let different devices like smartphones to communicate with other NFC enabled devices.”

Row 3: 1

This response does receive a point because they identify a positive effect as faster data transfer: “This is where NFC can come along and allow people to transfer all this data at faster rates if both devices are close.”

Row 4: 1

The response identifies a positive effect as faster data transfer and a negative effect as big technology companies having greater access to private information like credit cards.

Row 5: 0

This response does not receive a point for this row because it does not explicitly state an effect on the economy, society, or culture.

Row 6: 0

The response does not correctly identify the type of data, only says “the data.”

Row 7: 0

The response does not receive a point because while they do say, “The only data concern along with this is the process is the concern of data being intercepted,” this does not explain the concern, it merely restates what a data privacy issue is.

Row 8: 0

The response contains no in-text citations.
