Alex Beaver Ziggy Sheynin

Mr. Ettlin

APCSP, Period 1

8 January 2020

Grading Sample F: Social Media

Row 1: 0

The point is not received because, while an artifact is identified, the artifact does not attempt to

convey what it is in any manner or how it functions.

Row 2: 1

The point is received because the written response identifies the purpose of social media.

Row 3: 1

The point is received because the written response identifies the negative mental health impact of

social media.

Row 4: 0

The point is not received because a negative effect is identified and while the writer intended to

write a positive effect, it was not an effect but rather a use case scenario. Even if it is treated as a

positive effect, it is not developed enough to be seen as a plausible effect.

Row 5: 1

The point is received because the negative pertains to society and culture because it relates to

mental health issues, which is a societal issue.

Row 6: 0

The point is not received because the box does not demonstrate any knowledge of how the data is produced, consumed, or transformed. It also only says *data* and does not specify the type or context for the data.

Row 7: 1

The point is received because the author identifies the risk of people finding personal data through social media platforms.

Row 8: 1

The person has three sources that they cite within the responses.
